## Massachusetts

**Installation and Implementation Guide** 

### **Technical support**

Contact methods:

- Phone: 800-921-5300, extension 2
- Email: <u>support@firehousesoftware.com</u>

**Caution:** Call to receive top-priority service if you have a software emergency, such as an FH product that is completely down.

- Chat: http://www.firehousesoftware.com/contact-us/support.php
- Web site: http://www.firehousesoftware.com/contact-us/support.php

So that we can better serve you, please provide the following information when you contact FH technical support.

- Fire department name
- City
- State
- Phone number
- A description of your problem
- · A list of the steps necessary to recreate the problem
- Schedule information in case a support technician needs to call you back

**Note:** An active support agreement is needed for technical support, or you can use pay-per-call support for each issue. To purchase a support agreement, contact the sales representative for your state. Information on contacting sales is available at <a href="http://www.firehousesoftware.com/contact-us/sales.php">http://www.firehousesoftware.com/contact-us/sales.php</a>.

When you contact us, tell us right away how much the issue impacts your immediate ability to use your FH product. Responses are classified by as follows:

- Emergency: An FH application or service is severely impacted for a single customer, and no practical workaround is available.
- Urgent: An FH application or service is severely impacted for a single customer, but a practical workaround is available.
- High: An FH application or service is severely impacted for single or multiple customers.
- Normal: An FH application or service is impacted for single or multiple customers.
- Low: An FH application or service is impacted for single or multiple customers, where ongoing impacts are minimal.

For non-emergency inquires, a response within two business days is normal. If you are not satisfied that your issue is being resolved in a timely fashion, you can escalate the issue to the next level. On the FH web site (<u>http://www.firehousesoftware.com/</u>), choose either **Support/Training** > **Support Ticket Escalation** or **Contact Us** > **Support Ticket Escalation**. On the page that appears, fill out the required fields and then click **Submit**. An email with your information is sent to the technical support manager, who will investigate the situation and work to resolve the issue.

## Introduction

The NEMSIS Installation and Implementation Guide is designed to help you configure your department's **FIREHOUSE** Software® database to use the National EMS Information System (NEMSIS) code set. This guide also helps you prepare your database for exporting EMS incident records and detailed demographic information for local, state, and national agency reporting.

NEMSIS is supported in **FIREHOUSE** Software 7.5.40 or higher. This guide documents the steps needed to install and implement NEMSIS with a more recent version of **FIREHOUSE** Software.

#### WARNING:

- Review the entire guide thoroughly before beginning.
- Do not enter any new EMS incident reports with patients into FH® before you complete this guide.
- Demographic information is exported independently of the patient information.

**Note:** While we recommend performing all the items in this guide, you should verify the current requirements to be in full compliance with your local/state reporting body.

Install your state's custom .FHz files, on page 9

# Overview of tasks for installing and implementing the NEMSIS code set

Below is a high-level list of the tasks you will perform when installing and implementing the NEMSIS code set. Detailed steps for performing each of the tasks below follow this list.

**WARNING:** Do not attempt the installation and implementation without the detailed steps on the following pages.

Tip: Print off this page of this file and use it as a checklist as you complete each of the steps.

- 1. Run FH Database Tools to compact database and rebuild database index files.
- 2. Back up your FIREHOUSE Software database.
- 3. Install your state's custom .  ${\tt FHz}$  files.
- Decide whether to map existing codes or replace your code set with the NEMSIS code set.
- 5. Do one of the following:
  - Map your existing EMS codes to the NEMSIS code set.
  - Replace your existing EMS codes with the NEMSIS code set.
- 6. Configure NEMSIS export options and medical devices class codes.
- 7. (If you mapped your existing EMS codes) Add or update codes to lookup tables.
- 8. Update EMS service numbers.
- 9. Update city codes.
- 10. Update unit codes.
- 11. Update station codes.
- 12. Update destination facilities codes.
- 13. Update medication codes.
- 14. Update procedure codes.
- 15. Update protocols used codes.
- 16. (If you mapped your existing EMS codes) Resolve invalid structures.
- 17. Set up staff member information.
- 18. Add additional user fields.
- 19. Install NEMSIS export utilities.
- 20. Verify the NEMSIS configuration.
- 21. (If necessary) Correct unit codes associated with multiple inventory item.
- 22. Export NEMSIS data for state and national reporting.

## **Run FH Database Tools**

You need to run FH Database Tools to compact the live database and rebuild database index files.

**WARNING:** Before beginning, verify that all FH users are logged out, and that FH is not running.

1. Choose Start  $\rightarrow$  Programs  $\rightarrow$  FIREHOUSE Software  $\rightarrow$  FIREHOUSE Software Database Tools.

-		🤰 Windows Live ID		
	Programs •	💼 FIREHOUSE Software 7 🔹 🕨		FIREHOUSE Software Enterprise Edition Tools
र्द्ध 👼	Documents •	1	FH	FIREHOUSE Software 7

	Help and Support		0	FIREHOUSE Software Internet Updates
S				FIREHOUSE Software Mobile License Manager
indows	Run		at "	FIREHOUSE Software System Activation
Ě.			1	Uninstall FIREHOUSE Software
> 0	Shut Down			
👫 Start		-		

The Database Tools - FIREHOUSE Software dialog box appears.

**Note:** (FH Enterprise) **Selected Database** lists the name of the SQL database to back up. If **Connect to Remote Database** is selected, **Rebuild Index Files** is renamed **Rebuild Remote Folder and Check Remote Database**.

Selected Database		
C:\FIREHOUSE Software\DemoD	ata\	
Connect To Remote Database		
Operations to Perform		
<ul> <li>Validate File Locations Checks for duplicate or misplace restore or a restore to the wrong</li> <li>Compact Tables Physically removes records mark narrative and memo fields to hel</li> </ul>	) location or manually moving file	es or folders.
<ul> <li>Rebuild Index Files         Rebuilds the index files from info operation must complete once s     </li> <li>Verify Logical Integrity         Performs various logical integrity     </li> </ul>	started or you will get errors runn	ing the program.
database.		

2. Verify that the path displayed in **Selected Database** is the correct location for your department's live database, and edit it if necessary.

**Note:** We are using the DemoData database for example purposes in these instructions. Use your live database when running Database Tools.

#### 3. Click View Active Logins.

The Active Logins - FIREHOUSE Software dialog box appears.

		Active Logins - FIREHO
Username	Workstation Name	ogin Time
		<
(1999)	)	) Active Logins Listed.

- 4. (If any login records are displayed in the **Active Logins** dialog box) Click **Attempt to Clear Invalid Logins**.
- 5. Click **OK** to return to the **Database Tools FIREHOUSE Software** dialog box.
- (FH Standard Edition) Select Compact Tables and Rebuild Index Files, and then clear any other check boxes.
- 7. (FH Enterprise Edition) Do the following.
  - a. Verify that **Connect To Remote Database** is selected.
  - b. Select Compact Tables and Rebuild Remote Folder and Check Remote Database.
- 8. Click Run.

Progress updates appear on your screen. This process may take some time if you have many records or a large database.

**Note:** If errors appear and you need assistance resolving them, contact FH<sup>®</sup> technical support.

- 9. Click Close to close the Database Tools dialog box.
- 10. Continue with **Backup your FH database**, on page 5.

## Backup your FH database

**WARNING:** Before beginning, verify that all FH users are logged out, and that FH is not running.

1. Choose Start → Programs → FIREHOUSE Software → FIREHOUSE Software Backup Utility.

The Login Required - FIREHOUSE Software dialog box appears.

🔫 Login Red	quired - FIREHOUSE Software	×
User Name		
Password		
Database	C:\FIREHOUSE Software\DemoData\	]
Login to Re	emote Database OK Cancel	

2. Enter the administrative username and password for FH in the Login Required - FIREHOUSE Software dialog box, and then click OK.

The **Backup/Restore - FIREHOUSE Software** dialog box appears. Depending on whether you are using FH Standard or FH Enterprise, different tabs are available in the dialog box.

3. Depending on whether you are using FH Standard or FH Enterprise, do the corresponding steps below.

FH Standard

The **Backup** and **Restore** tabs are active.

Packup/Restore	- FIREHOUSE Software
Backup Bestore	Remote Backup/Restore
Select the compo	onents to back up
🔽 Database	C:\FIREHOUSE Software\DemoData\
🔽 System Data	C:\FIREHOUSE Software\System\
Queries	C:\FIREHOUSE Software\Queries\
Reports	C:\FIREHOUSE Software\Reports\
Lookup Tables	
Test for exclusive	e access to database before running backup
Verify backup file	e upon completion
Path of backup fil	e to auto-generate 🗹 Auto-generate file name
C:\FIREHOUSE Soft	ware\Backup\
	OK Cancel

1. Verify that **Database, System Data**, **Queries**, and **Reports** are selected and the paths for them are correct.

**Note:** If any of the paths are incorrect, you can either click in the path field and type the correct path, or you can click the lookup ... button to the right of the field and navigate to the correct location as you did earlier.

- 2. Select Verify backup upon completion.
- 3. Verify that the path displayed in **Path of backup file to auto-generate** is correct.

#### FH Enterprise

The Remote Backup/Restore tab is active.

Backup/Restore (fh_demo) - FIREHOUS	E Soft	ware	
ackup <u>R</u> estore <u>Remote Backup/Restore</u>			
🖲 Backup To			
No Backup Devices Found	•	Manage Backu	p Devices
Name of Backup			
Description of Backup			
© Restore From			
No Backup Devices Found	<u> </u>		
Backup to Restore			
			~
Description of Backup			
		OK	Cancel

- 1. Under **Backup To**, check the backup device listed.
- 2. (If the displayed listing is **No Backup Devices Found**, or if the backup device is not listed in the menu) Do the following.
  - a. Click Manage Backup Devices.

The Remote Backup Devices dialog box appears.

11 Remote Backup Dev	rices - FIREHOUSE Softw	are 🛛 👔
Backup Device		
No Backup Devices Foun		· · · · · · · · · · · · · · · · · · ·

	( )	

b. Click Add Backup Device.

The Add Remote Backup Device dialog box appears.

🛍 Add Remote Backup Devi	ice - FIREHOU	ISE Software 🛛 🔀
Device Name		
Device Path and Filename (rel	ative to the SQL s	erver)
	OK	Cancel
	UK	Lancel

c. In **Device Name**, type the name of the device to back up the SQL Server database to.

**Note:** Spaces are not allowed in the device name.

- d. In **Device Path and Filename**, type the complete path and file name relative to the SQL Server database.
- e. Click OK.

The new device appears in the Remote Backup Devices dialog box.

**Note:** If you remove a backup device later, the file is not physically removed. If you add the same backup device back again, and if the file has not been deleted in the interim, they will be available again.

f. In the Remote Backup Devices dialog box, click OK.

The new device appears in the **Backup To** menu, and is selected by default.

**Caution:** If your only backups are located on a hard drive and that hard drive crashes, you will lose access to the backup.

- 3. Under **Backup To**, in **Name of Backup**, type a name for the backup you are creating.
- 4. In **Description of Backup**, type a description for the backup you are creating.
- 4. Click OK.

Progress updates appear on your screen. This process may take some time if you have many records or a large database.

Note: If you encounter errors and need assistance, contact FH<sup>®</sup> technical support.

5. Continue with Install your state's custom . FHz files.

## Install your state's custom . FHz files

1. Obtain your state-specific . FHz files in one of the following ways:

From this loc- ation	Do this
FIREHOUSE Software 7 installation CD	<b>Note:</b> If possible, obtain these files from the <b>FIREHOUSE</b> Software web site, as newer versions may exist.
	a. Open the State folder.
	b. Copy NemsisMA.FHz and NemsisMA2.FHz.
	c. On your hard drive, paste the . ${\tt FHz}$ file.
FIREHOUSE Software web	a. In a web browser, go to <u>http://www.fire-</u> housesoftware.com/download/NemsisMA.FHz.
site	<b>Caution:</b> Do not click <b>Open</b> in the <b>File Download</b> dialog box that appears.
	b. Click <b>Save</b> .
	c. In the <b>Save As</b> dialog box that appears, navigate to the location on your hard drive where you want to save the file.
	d. In File name, change the file extension from . <code>zip</code> to . <code>FHz</code> .
	WARNING: It is very important to change this file extension to . FHz, for FH to recognize the file. You do not need to unzip this file after it is downloaded.
	e. In Save as type, select All Files, and then click Save.
	f. In the Download Complete dialog box, click Close.
	g. In a web browser, go to <u>http://www.fire-housesoftware.com/download/NemsisMA2.FHz</u> .
	h. Repeat steps b-f to download the next . ${\tt FHz}$ file.

**Tip:** You can access state-specific NEMSIS information on the **FIREHOUSE** Software web site at http://www.firehousesoftware.com/support/state-info/.

- 2. (FH Enterprise) Verify that the user name and password for Remote Connection Configuration is for a SQL administrator account.
- 3. Log into FH as an administrator.
- 4. Choose Administration  $\rightarrow$  Install New or Updated Components.

The Install New or Updated Feature dialog box appears.

Ħ Install New or Upda	ated Features

Merge new or updated components with existing components			
Select All	ОК	Cancel	

7. Click OK.

A series of dialog boxes and status bars displaying the progress of the installation appear and then close automatically. The installation process can take some time to complete, depending on your computer configuration and the number of codes included.

- 8. Repeat steps 5-8 to find and open the NemsisMA2.FHz file you saved to your hard drive.
- 9. Continue with **Decide whether to map existing codes or replace your code set with the NEMSIS code set**, on page 12.

# Decide whether to map existing codes or replace your code set with the NEMSIS code set

Mapping codes	Replacing codes
Mapping codes allow you to continue using your existing department codes during data entry by assigning them their NEMSIS equi- valent. The NEMSIS code that your code	If you choose to replace the codes for EMS, then all existing EMS lookup code will be replaced with the new NEMSIS codes.
is mapped to will be used when the data is exported for submission to your local or state agency. An average code set has between 600 and 800 codes that will need to be mapped to the appropriate NEMSIS code.	WARNING: If you have existing EMS incident records, these records must be archived before replacing your existing EMS codes with the NEMSIS code set.
<b>Tip:</b> If you decide to map your codes and not replace them, you should study the NEMSIS codes to understand which NEMSIS codes are the equivalent of your codes.	Replacing your codes with NEMSIS codes will in-effect remove your codes, making your old codes and descriptions no longer available to the historical records (old EMS incidents). Archiving your exist-
<b>Note:</b> Mapping codes takes several hours to complete. States with unique code sets could have a larger number of codes, resulting in longer mapping time.	ing EMS incidents generates an archive database, and all your previous incidents are moved to this database. Your archive database will still be accessible and all his torical records will remain valid. Archiving
Caution: Each code must be mapped to an appropriate NEMSIS code, or the code cannot be used during EMS record entry. If a non-mapped code is used dur- ing data entry, the record(s) will not export validly to NEMSIS. Similarly, custom groupings in your EMS lookup tables will not export val- idly. Codes in custom groups will need to be moved later into the new, pre- defined NEMSIS groups.	your historical incident records provides you with a clean environment for the new code set.

1. Review the information below about mapping codes and replacing your EMS codes with NEMSIS codes.

2. Decide whether you want to map your existing EMS codes to NEMSIS codes, or whether you want to replace your existing EMS codes with the NEMSIS codes.

**WARNING:** When making this decision, it is vital that you understand the mapping codes and replacing codes information in the previous step.

**Note:** If you have any questions while making this decision, contact **FIREHOUSE** Software technical support at 800-921-5300, option 2.

- 3. Depending your decision, continue with one of the following:
  - Continue with Map your existing EMS codes to the NEMSIS code set, on page 14.
  - Continue with Replace your existing EMS codes with the NEMSIS code set, on page 19.

## Map your existing EMS codes to the NEMSIS code set

#### Note:

- Users can log in and use the software during these steps, but the EMS module should not be accessed while you are mapping codes.
- You will need an FH administrator account to perform the steps below.
- (FH Enterprise) You must log into FH using an SQL administrator account for proper security access to the user field tables of the FH database.
  - 1. Notify all FH users not to use the EMS module until you have completed mapping the existing EMS codes to the NEMSIS code set.
  - 2. Log in to FH using an administrator account.
  - 3. Choose Administration  $\rightarrow$  Administrative Options.

The Administrative Options dialog box appears.

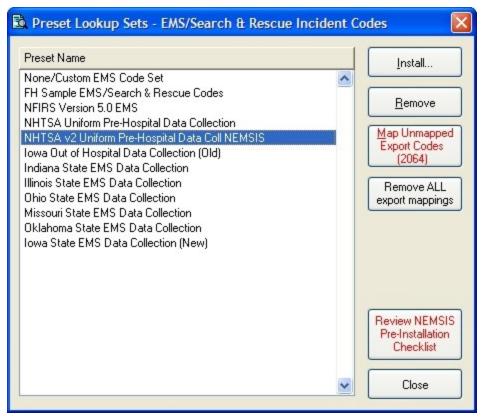

4. Click the Incident  $\rightarrow$  EMS/Search & Rescue  $\rightarrow$  State Reporting tabs.

Administrative Options
License General Database Incident Occupancy Staff Inventory Hydrant Invoicing
All Incidents NFIRS EMS/Search & Rescue Investigation Dispatch/Remote Station Report
General Assessments & Treatments State Reporting Privacy and HIPAA NEMSIS
The active EMS code set defines most of the lookup codes, rules and requirements that are used for EMS report data entry. It is recommended that you NOT mix reports entered under two different code sets in the same database.         Click the button to change your active EMS code set only if you are setting up your system for the first time, or have archived reports previously entered.         Change EMS Code Set
Carlot Content Lithocode Values Enter your assigned lithocode block range Start
Additional State Reporting Requirements
Require Crew Member Numbers
OK Cancel

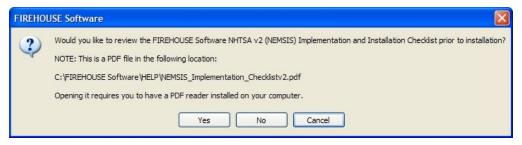

#### 5. Click Change EMS Code Set.

The Preset Lookup Sets - EMS/Search & Rescue Incident Codes dialog box appears.

6. Select NHTSA v2 Uniform Pre-Hospital Data Coll NEMSIS from the list, and then click Install.

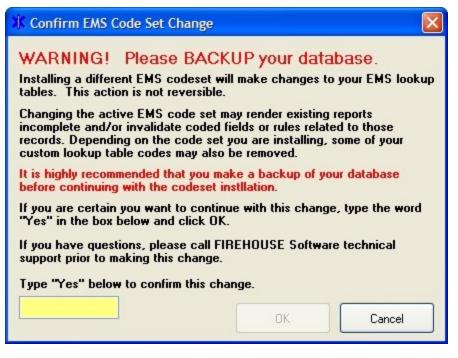

A message appears asking if you would like to review the *NEMSIS Implementation and Installation Guide* prior to installation.

7. Click **No**, since you are already reading the *NEMSIS Implementation and Installation Guide*.

The Confirm EMS Code Set Change dialog box appears.

8. In the yellow field, type Yes and then click OK.

The Map Existing Codes or Replace All Codes dialog box appears.

🕷 Map Existing Codes or Replace Al	I Codes 🛛 🛛
<ul> <li>Map Existing Codes (mappings must be</li> <li>Replace with Codeset Codes (old data</li> </ul>	
	OK Cancel

9. Select Map Existing Codes (mappings must be defined before you can export) and then click OK.

A message dialog box appears informing you that if you have created groupings for your existing codes, the codes will now appear in the lookup list under <Invalid Structure> until you move those codes to the existing pre-defined groups. It also warns that you will not be able to export data containing these codes until that re-grouping has been completed.

FIREH	IOUSE Software		
	NOTE: If you have created groupings for your existing codes, those groups will now show up in the lookup list under <invalid structure=""> until you move those codes into the existing pre-defined groups.</invalid>		
	You will not be able to export data containing these codes until that re-grouping has been completed.		
	OK		

Once the NEMSIS code set is installed, there may be codes that you had in locallyacceptable groupings that may need to be regrouped according to the NEMSIS structure.

10. Click OK.

The **Preset Lookup Categories - EMS/Search & Rescue Incident Codes** dialog box appears.

Category	ПК
Advanced Directive	
EMS Certification Level	
Complication	Cancel
ECG Lead

12. Click Yes.

A log file appears.

- 13. Check the log file for errors and warnings.
- 14. Choose File  $\rightarrow$  Exit to close the log file.

The Create Data Archive dialog box closes when the log file closes.

- 15. Verify that the EMS incidents deleted from your live database.
- 16. Create another backup of the database, as you did earlier.
- 17. Continue with Replace with code set codes, on page 23.

### Replace with code set codes

#### Note:

- Users can log in and use the software during these steps, but the EMS module should not be accessed while you replace the existing EMS codes with the NEMSIS code set.
- You will need an FH administrator account to perform the steps below.
- (FH Enterprise) You must log into FH using an SQL administrator account for proper security access to the user field tables of the FH database.
  - 1. Notify all FH users not to use the EMS module until you have completed replacing the existing EMS codes with the NEMSIS code set.
  - 2. Log in to FH using an administrator account.
  - 3. Choose Administration  $\rightarrow$  Administrative Options.

The Administrative Options dialog box appears.

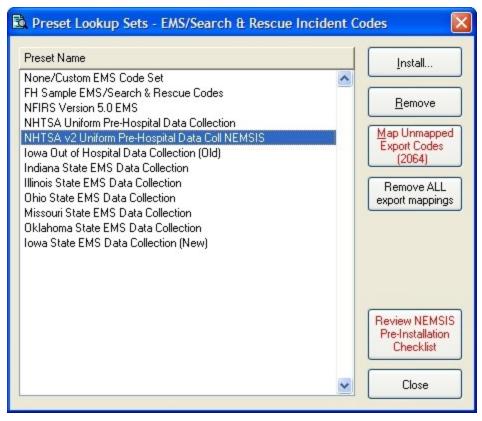

4. Click the Incident  $\rightarrow$  EMS/Search & Rescue  $\rightarrow$  State Reporting tabs.

Administrative Options
License General Database Incident Occupancy Staff Inventory Hydrant Invoicing
All Incidents NFIRS EMS/Search & Rescue Investigation Dispatch/Remote Station Report
General Assessments & Treatments State Reporting Privacy and HIPAA NEMSIS
The active EMS code set defines most of the lookup codes, rules and requirements that are used for EMS report data entry. It is recommended that you NOT mix reports entered under two different code sets in the same database. Click the button to change your active EMS code set only if you are setting up your system for the first time, or have archived reports previously entered. Change EMS Code Set

5. Click Change EMS Code Set.

The Preset Lookup Sets - EMS/Search & Rescue Incident Codes dialog box appears.

6. Select NHTSA v2 Uniform Pre-Hospital Data Coll NEMSIS from the list, and then click Install.

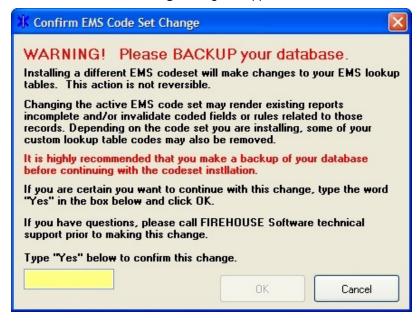

A message appears asking if you would like to review the *NEMSIS Implementation and Installation Guide* prior to installation.

7. Click **No**, since you are already reading the *NEMSIS Implementation and Installation Guide*.

The Confirm EMS Code Set Change dialog box appears.

8. In the yellow field, type Yes and then click OK.

The Map Existing Codes or Replace All Codes dialog box appears.

🕷 Map Existing Codes or Replace All	Codes	
<ul> <li>Map Existing Codes (mappings must be</li> <li>Replace with Codeset Codes (old data )</li> </ul>		
	ОК	Cancel

9. Select Replace with Codeset Codes (old data may become invalid), and then click OK.

If you have any EMS runs still in FH, the **Confirm EMS Code Change Set** dialog box appears. If this is a new installation of FH, or if you have deleted the source records, this dialog box does not appear.

🗱 Confirm EMS Code Set Change	×	
WARNING! Please ARCHIVE your data		
There are EMS reports in your database which were entered using a different code set than the one you are installing. Code Descriptions for old incidents WILL be changed or lost!	e	
Changing the active EMS code set may render existing reports incomplete and/or invalidate coded fields or rules related to those records. Depending on the code set you are installing, some of your custom lookup table codes may also be removed.		
It is highly recommended that you archive your current EMS reports prior to making this change. This allows incidents based on the codeset to be removed from your current data, but still be available in an archive for historical reference.		
If you are certain you want to continue with this change, type the word "Yes" in the box below and click OK	к.	
If you have questions, make a backup and please call FIREHOUSE Software technical support prior to making this change.		
Type "Yes" below to confirm this change.		
OK Cancel		

10. In the yellow field, type Yes, and then click OK

The **Preset Lookup Categories - EMS/Search & Rescue Incident Codes** dialog box appears.

Category	ОК

dechanism of Injury/Nature of Illness		
Complaint Benorted by Dispatch	~	

#### 11. Click OK.

A warning message appears, informing you that existing codes will be overwritten in selected categories, and asking you whether you want to continue.

FIREHOL	USE Software
?	WARNING: Existing codes will be overwritten in selected categories. Continue with installation of NHTSA v2 Uniform Pre-Hospital Data Coll NEMSIS?
	Yes No

12. Click Yes.

A series of messages and progress bars appear as the codes are overwritten. When the process completes, another message box appears, informing you that the preset lookup setup set NHTSA v2 Uniform Pre-Hospital Data Coll NEMSIS installed successfully.

- 13. Click **OK**.
- 14. In the **Preset Lookup Sets EMS/Search & Rescue Incident Codes** dialog box, click **Close**.
- 15. In the Administrative Options dialog box, click OK.
- 16. Notify all FH users you have completed mapping the existing EMS codes to the NEMSIS code set, and that they may use EMS module again.
- 17. Continue with **Configure NEMSIS export options and medical devices class codes**, on page 28.

# Configure NEMSIS export options and medical devices class codes

1. Choose Administration  $\rightarrow$  Administrative Options.

The Administrative Options dialog box appears.

2. Click the Incident  $\rightarrow$  EMS/Search & Rescue  $\rightarrow$  NEMSIS tabs.

Administrative	Options
License <u>G</u> eneral	Database Incident Occupancy Staff Inventory Hydrant Invoicing
All Incidents NFIF	S EMS/Search & Rescue Investigation Dispatch/Remote Station Report
General Assessn	nents & Treatments State Reporting Privacy and HIPAA NEMSIS
NEMSIS - Ex	porting Requirements port only data elements required for the national database. Clude patient confidential information in export.
Run XML Va	idation on Each Incident
O Always Until O Never	100 Incidents have validated successfully
incident is comp export while the	oftware can check an EMS incident against the NEMSIS standard XSD as soon as the lete. This will catch almost all problems that may occur when creating the NEMSIS person entering the data has the best ability to correct the problem. If the time to check problem that will be the best ability to correct the problem. If the time to check

 (Optional, if you are only reporting to the national reporting body and not to local agencies) Under NEMSIS - Reporting Requirements, select NEMSIS - Export only data elements required for the national database.

**WARNING:** Do not select **NEMSIS** - **Export only data elements required for the national database** if you are reporting to state and local agencies.

- 4. (If patient information is required for state reporting) Under **NEMSIS Reporting Requirements**, select **Include patient confidential information in export**.
- 5. Under **Run XML Validation on Each Incident**, select the option indicating how frequently you want incidents to be validated.

**Tip:** While validating each incident can extend the time it takes for the software to save each incident, it is much easier to correct problems if they are found during data entry.

6. (If it is not greyed out) For **Medical Devices Inventory Class**, in the yellow field, enter an existing code or a new code for medical device items in the Inventory module.

**Note: Medical Devices Inventory Class** is greyed out if your department has not purchased and activated the Inventory module in FH. If it is greyed out, skip this step and step 7 below.

- 7. (If you entered a new medical devices inventory code) Do the following:
  - a. Click the lookup button to the right of Medical Devices Inventory Class field.
     The Lookup Inventory Class Codes dialog box appears.

🗟 Lookup	Inventory Class Codes		
Code APPF	Description Apparatus - Fire		Eind

b. At the bottom of the dialog box, click **Browse**.

A **Query** or **Find** dialog box appears, depending on what query is set as the default in your installation of FH.

c. Use the dialog box to select an inventory record.

The **Inventory** dialog box populates with data.

- d. In **Inventory Class**, enter a medical device inventory code or use the lookup ... button to select a medical device inventory code.
- e. Click Save.
- f. Repeat steps b-e for any other medical device items that use the new medical device inventory class codes you created.
- 10. Do one of the following:

lf you	Then do this
Mapped your existing EMS codes to the NEMSIS code set	Continue with <b>Add or update codes in lookup tables</b> , on page 31.
Replaced your existing EMS codes with the NEMSIS code set	Continue with <b>Update EMS service numbers</b> , on page 33.

## Add or update codes in lookup tables

**Note:** If you replaced your existing EMS codes with the NEMSIS code set, skip the steps below and go to **Update EMS service numbers**, on page 33.

When you decided to map your existing EMS codes to the NEMSIS code set, no new NEMSIS codes are added to your lookup tables. Now you need to manually add these lookup codes, so that they are available during data entry.

1. Choose **Tools**  $\rightarrow$  **Lookup Tables**.

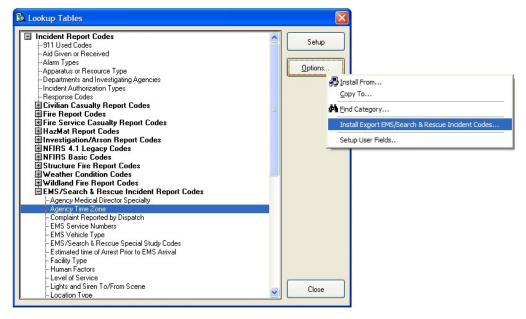

The Lookup Tables dialog box appears.

🗟 Lookup Tables	
<ul> <li>Incident Report Codes</li> <li>Occupancy Management Codes</li> <li>Staff Activity and Training Codes</li> <li>Equipment and Inventory Codes</li> <li>Hydrant Management Codes</li> <li>Invoicing and Accounts Receivable Codes</li> <li>System-Wide Codes</li> <li>User-Defined Field Codes</li> </ul>	Setup

2. Expand Incident Report Codes  $\rightarrow$  EMS/Search & Rescue Incident Report Codes, and then highlight Agency Time Zone.

**Caution:** Be careful to highlight **Agency Time Zone** with a single left-mouse click. If you double-click the option, the lookup dialog box that appears does not allow you to add or update preset codes.

3. Click Options  $\rightarrow$  Install Export EMS/Search & Rescue Incident Codes.

The Preset Lookup Codes - Agency Time Zone dialog box appears.

4. Select the appropriate codes for your area, and then click **OK**.

Codes in this category can be selectively installed. Please highlight the codes you want to install on your system.			
Description	Code		Select All
GMT-04:00 Atlantic Time	5970	~	
GMT-05:00 Eastern Time	5960

- 14. Do one of the following:

lf you	Then do this
Mapped your existing EMS codes to the NEMSIS code set	Continue with <b>Resolve invalid structures</b> , on page 49.
Replaced your existing EMS codes with the NEMSIS code set	Continue with Set up staff member inform- ation, on page 51.

## **Resolve invalid structures**

**Note:** You only need to do the steps below if you mapped your existing EMS codes to the NEMSIS code set. If you replaced your existing EMS codes with the NEMSIS code set, skip this topic and go to **Set up staff member information**, on page 51.

If you had created groupings in your EMS lookup tables for your existing codes, those groupings are now invalid structures in the NEMSIS code structure. To permit incident records containing these codes to export, the codes must be moved into the new, pre-defined NEMSIS groups.

1. Choose **Tools**  $\rightarrow$  **Lookup Tables**.

The Lookup Tables dialog box appears.

- 2. Expand Incident Report Codes  $\rightarrow$  EMS/Search & Rescue Incident Report Codes.
- 3. Select Agency Medical Director Speciality, and then click Setup.

The Lookup - Agency Medical Director Speciality dialog box appears.

4. Check to see if **\_INVALID\_** appears in the list.

🗟 Lookup - Ager	ncy Medical Director Specialty		×
Code	Description		Eind
IINVALID_	<invalid structure=""></invalid>		New
			<u>E</u> dit

5. Do one of the following:

Does _INVALID_ appear?	Then do this
No	Click Close.
Yes	Resolve the invalid structures with the steps below. 1. Expand <b>_INVALID_</b> .
	<ol> <li>2. (If groups appear below _INVALID) Expand a group below _INVALID</li> </ol>
	<ol> <li>Select a lookup table, and then click Edit.</li> <li>The Code dialog box for that table appears.</li> </ol>

Does _INVALID_ appear?	Then do this
	<ul> <li>Code for</li> <li>Code for</li> <li>Description</li> <li>Bi</li> <li>FIRS Code</li> <li>Export Code</li> <li>Date Added</li> <li>77</li> <li>Group</li> <li>From Group, select the name of the group the item should be in.</li> <li>Click Save.</li> <li>Repeat the steps above for the rest of the groups and lookup tables listed under _INVALID</li> </ul>
	<b>Note:</b> Once you have moved all the lookup tables in a group under _ <b>INVALID</b> _ to a valid group, the group under _ <b>INVALID</b> no longer expands.
	7. In the <b>Lookup</b> dialog box for the lookup table, click <b>Close</b> .
	8. (Optional) In the <b>Lookup Tables</b> dialog box, select the lookup table again and select <b>Edit</b> to verify that <b>_INVALID_</b> is gone.

- 6. Repeat steps 4-6 for the rest of the lookup tables listed before the **EMS Clinical Codes** group.
- 7. For each of the groups listed under **EMS/Search & Rescue Incident Report Codes**, expand the group and repeat steps 4-6 for each of the lookup tables listed within the group.

**Note:** You do not need to expand **Nemsis Pre-Defined User Fields** and perform steps 4-6 on the lookup tables in that group.

- 8. In the **Lookup Tables** dialog box, collapse **Incident Report Codes**.
- 9. Expand Staff Activity and Training Codes  $\rightarrow$  Staff Member Codes.
- 10. For EMS Certification Level and EMS Employment Status, repeat steps 4-6.
- 11. In the Lookup Tables dialog box, click Close.
- 12. Continue with **Set up staff member information**, on page 51.

# Set up staff member information

1. In the main FH toolbar, click Staff.

The Staff dialog box appears, open to the Basic tab.

2. In **Last** and **First**, enter a staff member's last and first name to access their staff record. The fields populate with data for that staff member.

- 7. Under **Personnel**, in **EMS Certification #**, verify that the staff member's EMS certification number is entered, or enter it if necessary.
- (If your state requires staff member EMS certification levels and certification numbers) In Initial Certification Date and Current Certification Date, verify that the staff member's certification dates are entered, or type them in their fields.
- 9. Click Save.
- 10. Click Close.
- 11. In the **Staff** dialog box, click **Save**.
- 12. Click Close.
- 13. For each EMS staff member, repeat steps 1-12.
- 14. Continue with Add additional user fields, on page 53.

# Add additional user fields

Local or state agencies may require some NEMSIS fields which exist in FH as pre-defined (PD) user fields.

**Note:** To determine if you need to add additional user fields, contact your state EMS agency to verify if additional fields are required. If you do not need to add additional user fields, skip the steps below and continue with **Install NEMSIS patient and demographic export utilities**.

1. Choose Administration  $\rightarrow$  User-Defined Fields.

The User-Defined Fields Setup dialog box appears.

User-Defined Fields Setup	×
<ul> <li>NFIRS Incident Reporting</li> <li>EMS/Search &amp; Rescue Incident Reporting</li> <li>Occupancy &amp; Inspection Management</li> <li>Staff Management</li> <li>Training Classes &amp; Programs</li> <li>Staff Scheduling</li> <li>Apparatus, Equipment and Inventory</li> <li>Hydrant Management</li> <li>Invoicing and Accounts Receivable</li> <li>Department Journal, Events and Station Mgmt</li> </ul>	Setup

2. Expand NFIRS Incident Reporting, select Responding Unit User Fields, and then click Setup.

The **Responding Unit User Fields** dialog box appears, with the **User Fields Toolbar** over it.

	Responding Unit User Fields			
User Fields Toolbar				
		🔚 Save	X Delete	Cancel

- 3. (If necessary) Move the User Fields Toolbar, so that it is not blocking access to the **Page1** tab in the **Responding Unit User Fields** dialog box.
- 4. In the User Fields Toolbar, click PD.

5. In the **User-Defined Fields Setup** dialog box, click the **Page1** tab.

The Select Field to Add dialog box appears.

FH Select Fie	ld to Add
Table Name	Responding Unit User Fields
E2.13 Vehicle E2.15 Vehicle	Dispatch Zone Dispatch Location Initial GPS Location - Lat Initial GPS Location - Lon
	~
	×
	OK Cancel

6. Select the name of the user field you want to add, and then click **OK**.

The User-Defined Field Properties dialog box appears.

User-Defined Field	d Properties	
Field Rules Control	Caption	
NEMS_DISP_LOC	Dispatch Location	Formatting         Custom           Alpha Only         Alpha Only

Lookup Category	/	Text Box
		OK Cancel

- 7. Verify that the information in the dialog box is correct, and edit it if necessary.
- 8. Click **OK**.
- 9. Repeat steps 4-8 for each of the responding unit user fields you want to add.

10. In the **Responding Unit User Fields** dialog box, click **Save**.

The **Confirm Update - Responding Unit User Fields** dialog box appears, displaying the user fields you added.

	Update - Responding Un		12 N.2		X
	g changes will be applied to the u therwise select Cancel.	iser held table.	. I o continue v	with this up	odate,
Action	Field Name	Туре	Length	Decim	als
Add	NEMS_DISP_LOC	С	30	0	~
Add	NEMS_GPSIN_LAT	N	11	6	
Add	NEMS_GPSIN_LONG	N	11	6	
100		1	1	10	

11. Click **OK**.

The Confirm Update - Responding Unit User Fields dialog box, Responding Unit User Fields dialog box, and User Fields Toolbar all automatically close, leaving the User-Defined Fields Setup dialog box accessible again.

12. Repeat the process described in steps 2-11 for the remaining user fields:

User fields	In the dialog box, expand and select
Staff Activity Participant	Staff Management $\rightarrow$ Staff Activity Participant User Fields
Incident	EMS/Search & Rescue Incident Reporting → EMS/Search & Rescue Incident User Fields
Patient Procedures	EMS/Search & Rescue Incident Reporting $\rightarrow$ EMS/Search & Rescue Patient Procedures User Fields
Patient/Victim	EMS/Search & Rescue Incident Reporting → EMS/Search & Rescue Patient/Victim User Fields
Patient/Access/Vitals	EMS/Search & Rescue Incident Reporting $\rightarrow$ EMS/Search & Rescue Patient/Access/Vitals User Fields

A comprehensive list of FH pre-defined user fields is available in **Appendix: Listing of FH predefined user fields**, on page 68.

- 13. In the User-Defined Fields Setup dialog box, click Close.
- 14. Continue with Install NEMSIS patient and demographic export utilities, on page 56.

# Install NEMSIS patient and demographic export utilities

1. Obtain the NemsisDemographicExport.FHz and NemsisPatientExportv2.FHz files in one of the following ways:

From this loc- ation	Do this
FIREHOUSE Software 7 installation CD	<b>Note:</b> If possible, obtain these files from the <b>FIREHOUSE</b> Software web site, as newer versions of the files may be available.
	1. Open the State folder.
	<ol> <li>Copy NemsisDemographicExport.FHz and NemsisPatientExportv2.FHz.</li> </ol>
	3. On your hard drive, paste the two . ${\tt FHz}$ files.
FIREHOUSE Software web site	<ol> <li>In a web browser, go to <u>http://www.firehousesoftware.com/download/</u> <u>NemsisPatientExportv2.FHz</u>. The File Download dialog box appears.</li> </ol>
	Caution: Do not click Open in the dialog box.
	2. Click Save.
	The <b>Save As</b> dialog box appears.
	<ol><li>Navigate to the location on your hard drive where you want to save the file.</li></ol>
	4. In File name, change the extension of the file from .zip to .FHz.
	<b>WARNING:</b> It is very important to change this file extension to . FHz, for FH to recognize the file. You do not need to unzip this file after it is downloaded.
	5. In Save as type, select All Files.
	6. Click <b>Save</b> .
	The <b>Download Complete</b> dialog box appears.
	7. Click Close.
	<ol> <li>In a web browser, go to <u>http://www.firehousesoftware.com/dwnld/</u> NemsisDemographicExport.FHz.</li> </ol>
	9. Repeat steps 2-6 to download the next . FHz file.

- 2. (FH Enterprise) Verify that the user name and password for Remote Connection Configuration is for a SQL administrator account.
- 3. Log into FH as an administrator.
- 4. Choose Administration  $\rightarrow$  Install New or Updated Components.

The Install New or Updated Features dialog box appears.

FH Install New or Updated Features	×
This utility will add new or updated components to your FIREHOUSE Software system.	
Install From	
Select the Items to Install	
Items listed in bold text already exist in the system and will be overwritten with new definitions if they remain checked.	
Install Method	
<ul> <li>Replace existing components with new or updated components</li> </ul>	
O Merge new or updated components with existing components	
	5
Select All Unselect All OK Cancel	

5. Click Install From.

The Select File dialog box appears.

Select File			? 🛛
Look in:	C FIREHOUSE Software	~	G 🏚 📂 🖽 -

My Computer	File name:		Open
My Network	Files of type: All Files (*.*)	ad-only	Cancel

6. Use the dialog box to find and open the NemsisDemographicExport.FHz file you saved to your hard drive.

It may take a few moments for the **Install New or Updated Features** dialog box to list the items that will install.

7. Click OK.

A series of dialog boxes and status bars displaying the progress of the installation appear and then close automatically. The installation process can take some time to complete, depending on your computer configuration and the number of codes included. This installs the report needed to check FH for user-defined fields.

- 8. Repeat steps 4-7 with NemsisPatientExportv2.FHz.
- 9. Continue with Verify the NEMSIS configuration, on page 59.

## Verify the NEMSIS configuration

You should confirm that your NEMSIS configuration creates a valid NEMSIS export file before actually exporting the NEMSIS data.

1. Choose Administration  $\rightarrow$  Administrative Options.

The Administrative Options dialog box appears.

- 2. Click the Incident  $\rightarrow$  EMS/Search & Rescue  $\rightarrow$  NEMSIS tabs.
- 3. Click NEMSIS Config Info.

The **NEMSIS Configuration Information** dialog box appears.

W NEMSIS (	Configuration Information			×

13. Click Run Query.

A dialog box with a message regarding your export appears.

**Note:** If errors appear and you need assistance resolving them, contact **FIREHOUSE** Software technical support at 800-921-5300, option 2.

- 14. (If the validation produced no errors) Click **OK** to display the log file for the export.
- 15. Repeat steps 1-13 for the **NEMSIS Demographic Data Export** file.
- 16. Submit the files to your data collection agency by their preferred method.

# Appendix: Listing of FH predefined user fields

Below is the comprehensive list of predefined user fields that you should add.

Return to step 12 of Add additional user fields.

Element	Staff Activity Participant User Fields
E04_03	Crew Member Level
E04_02	Crew Member Role
Element	Responding Unit User Fields
E2_14	Vehicle Dispatch Zone
E2_13	Vehicle Dispatch Location
E2_15	Vehicle Dispatch Location – Lat;
E2_15	Vehicle Dispatch Location – Lon
Element	EMS/Search & Rescue Patient Procedures User Fields
E19_04	Size of Procedure Equipment
Element	EMS/Search & Rescue Incident User Fields
E08_08	Incident Facility Code
E08_01	Other EMS Agencies at Scene
E08_02	Other Services at Scene
E23_04	Suspected Intentional/Unintentional
Element	EMS/Search & Rescue Patient/Victim User Fields
E06_06	Patient Home County
E06_09	Patients Home Country
E07_02	Certificate of Medical Necessity
E07_33	Response Urgency
E07_37	CMS Condition Code Modifier
E08_03	Time Differential Initial Responder
E10_10	Height of Fall in Feet
E12_02	Sending Facility Medical Record Number
E12_03	Destination Medical Records Number
E12_18	Presence of Emergency Info
E12_20	Pregnancy
E16_02	Broselow/Luten Color
E19_04	Tube Placement Confirm at Destination

Element	EMS/Search & Rescue Patient/Victim User Fields
E19_12	Successful IV Site
E19_13	Tube Placement Confirm at Scene
E20_11	How Patient Moved to Ambulance
E20_12	Patient Position During Transport
E20_13	How Patient Moved from Ambulance
E22_06	Patient ID Band/Tag Number
E23_01	Review Requested
E23_02	Potential Registry Candidate
E23_07	Personnel Exposed
E23_08	Required Reportable Conditions
Element	EMS/Search & Rescue Patient/Access/Vitals User Fields
E14_13	Carbon Dioxide
E14_14	Blood Glucose Level
E14_23	Pain Scale 1 – 10
E14_24	Stroke Scale
E14_25	Thrombolytic Screen
E14_26	APGAR Score
E14_28	Pediatric Trauma Score
E16_03	GU Assessment
E16_04	Skin Assessment
E16_05	Head/Face Assessment
E16_06	Neck Assessment
E16_07	Chest/Lungs Assessment
E16_08	Heart Assessment
E16_09	Abdomen-Left Upper Assessment
E16_10	Abdomen-Left Lower Assessment
E16_11	Abdomen-Right Upper Assessment
E16_12	Abdomen-Right Lower Assessment
